

UNIT RISK INVENTORY SURVEY

Assess Unit Readiness & Resilience

PURPOSE

The Unit Risk Inventory Survey, or URI, is an opportunity for Service Members to give an honest, anonymous assessment of their well-being, and offers commanders the ability to gauge unit readiness and resilience.

The URI is an anonymous questionnaire designed to screen for high-risk behaviors and attitudes that affect unit readiness and personal resiliency. The survey is an assessment tool that assists commanders in determining the occurrences of high-risk behavior through self-reported information.

This survey also allows commanders to be more in tune with their Service Members, educate them about resources, and find ways to boost morale to lower stress in the units.

The Risk Reduction Program Coordinator (RRPC) at the installation level is responsible for administering the URI to Service Members to get their feedback about risk areas.

5 FACTS ABOUT URI SURVEY

1

The anonymous in nature of the URI allows Service Members to respond honestly thus, enhancing the commander's awareness of high-risk occurrences/ behaviors; not just reported incidents.

2

On average, the URI takes no more than 30 minutes to complete.

3

It is recommended that 80-90% of the assigned unit strength participate.

4

Within 14 days, the unit commander will receive a summary report based on URI findings that identifying aggregate trends for multiple high-risk categories.

5

Commanders may coordinate the URI when seeking insight related to an increase in reported high-risk occurrences, upon assuming command, and pre-/ post-deployment.
